### Winter vacation homework

#### Answer the following questions

#### Do it in your homework copy .

1. We see green coloured plastic grass at many places these days. Space around natural grass feels cooler than space around the plastic grass. Can you find out why?
2. Give examples of liquids other than water that evaporate.
3. Fans move air around, creating a cooling sensation. It might seem strange to use a fan to dry wet clothes since fans usually make things cooler, not warmer. Normally, when water evaporates, it requires heat, not cold air. What do you think about this?
4. Usually, when sludge is removed from drains, it is left in heaps next to the drain for 3–4 days. Afterward, it is transported to a garden or a field where it can be used as manure. This approach reduces transportation cost of the sludge and enhances the safety of individuals handling it. Reflect upon it and explain how.
5. Observe the activities in your house for a day. Identify the activities that involve evaporation. How does understanding the process of evaporation help us in our daily activities?
6. How is water present in the solid state in nature?
7. Reflect on the statement “Water is our responsibility before it is our right.” Share your thoughts.
8. The seat of a two-wheeler parked on a sunny day has become very hot. How can you cool it down?

6. In what situations would you use decantation instead of filtration to separate solids from liquids?

7. Can you relate the presence of nasal hair to any separation process?

8. During the COVID-19 pandemic, all of us wore masks. Generally, what material are they made of? What is the role of these masks?

10. Yes You have learnt that different conditions are required for seed germination. How can we use this knowledge for proper storage of grains and pulses?.

11 You have learnt that a tail is present in a tadpole but it disappears as it grows into a frog. What is the advantage of having a tail in the tadpole stage?

12 Charan says that a wooden log is non-living as it cannot move. Charu counters it by saying that it is living because it is made of wood obtained from trees. Give your arguments in favour or against the two statements given by Charan and Charu.

12. What are the similarities and distinguishing features in the life cycles of a mosquito and a frog? A plant is provided with all the conditions suitable for its growth . Draw what you expect to see in the shoot and the root of the plant after one week. Write down the reasons.

13 Tara and Vijay set up the experiment shown in the picture (Fig. 10.10). What do you think they want to find out? How will they know if they are correct?

14 Design an experiment to check if temperature has an effect on seed germination
